

Program leadership with an engineer's curiosity.

I combine technical program management, applied machine learning, responsible-AI practice, and clear communication to move complex work toward measurable, human-centered outcomes.

CORE SKILLS

Capabilities

Program & product

Requirements scoping, validation plans, evaluation rubrics, go/no-go criteria, risk management, status reporting, cross-functional coordination, technical documentation.

ML & AI

GenAI and LLM pipelines, RAG, NLP, computer vision, deep learning, experimentation, feature engineering, evaluation, responsible AI.

Platforms & tools

Python

SQL

PyTorch

Scikit-learn

Hugging Face

AWS

Azure

Power BI

Git

EXPERIENCE

Where I've contributed

Technical Program Manager Fellow

May 2026 – Present

Microsoft

- Guide AI-assisted workflow initiatives from requirements and technical planning through validation, operational readiness, and handoff.
- Coordinate cross-functional partners, translate complex constraints into executable plans, and keep stakeholders aligned on risks, decisions, and next steps.
- Develop structured evaluation frameworks, test matrices, scoring rubrics, and go/no-go criteria to make AI quality and readiness easier to assess.
- Design human-in-the-loop review experiences and reliability safeguards that keep people in control of AI-assisted decisions.

Confidential project names, internal architecture, operational data, and unpublished metrics are intentionally omitted.

Faculty Teaching Assistant, AI Ethics

Nov 2025 – Present

Eastern University

- Support rolling graduate capstone cohorts by assessing responsible-AI artifacts and translating complex ethical and technical concepts into actionable feedback.
- Maintain responsive student support while applying accessibility accommodations and consistent documentation standards.
- Help students strengthen practical understanding of fairness, transparency, and responsible data use.

Founder & Lead ML Engineer

Jun 2025 – Nov 2025

Smart Sickle Cell Diary · Independent research

- Built and deployed a Streamlit diary experience for symptom logging, reflection, and LLM-assisted insights.
- Pivoted from symptom prediction toward a modular, cited RAG experience after identifying risks in minimizing patients' lived experience.
- Ran a 14-day mini-pilot with de-identified logs and improved onboarding through a how-to video and in-app guidance.

Education

M.S., Data Science

Eastern University

Postgraduate Certificate, AI/ML

University of Texas at Austin

B.A., Music

Obafemi Awolowo University

Associate Degree, Music Technology

The Polytechnic Ibadan

Certifications & recognition

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Google Data Analytics Professional Certificate
- Udacity Nanodegrees: AI Programming with Python and Machine Learning Fundamentals
- AWS & Udacity AI/ML Scholar, 2023–2024
